

Compact 5000 I/O EtherNet/IP Adapters

Catalog Numbers 5069-AENTR, 5069-AENTRK, 5069-AEN2TR

Topic	Page
About the Adapters	5
Install a Compact 5000 I/O System	6
Set the Network Internet Protocol (IP) Address	9
Install the Adapter onto the DIN Rail	10
Connect Power to the 5069-AEN2TR Adapter	10
Connect Power to the 5069-AENTR or 5069-AENTRK Adapter	13
Connect the Adapter to an EtherNet/IP Network	17
Install the End Cap	17
Power the System	18
Remove or Replace the Adapter	18
Specifications	19
Additional Resources	20

The Compact 5000™ I/O EtherNet/IP adapters perform the following functions:

- Facilitate high-speed data transfer across an EtherNet/IP network between Compact 5000 I/O modules and a Logix 5000™ controller.
- Provide system-side and field-side power to Compact 5000 I/O modules.
- Support as many as 31 Compact 5000 I/O modules

The adapters are configured with the Studio 5000 Logix Designer® application. For more information on how to use Compact 5000 I/O EtherNet/IP adapters, including the compatible Logix 5000 controllers and Logix Designer application versions, see the publications that are listed in [Additional Resources on page 20](#).

Summary of Changes

The publication has been changed as follows:

- Add Waste Electrical and Electronic Equipment (WEEE) information on [page 3](#).
- Add information about how to install an end cap on [page 17](#).
- Update the SA power and SA power Passthrough specification for the 5069-AENTR, and 5069-AENTRK adapters on [page 19](#).

IEC Hazardous Location Approval

The following applies to products with IECEx certification: Such modules:

- Are intended for use in areas in which explosive atmospheres caused by gases, vapors, mists, or air are unlikely to occur, or are likely to occur only infrequently and for short periods. Such locations correspond to Zone 2 classification to IEC 60079-0.
- The type of protection is "Ex nA IIC T4 Gc" according to IEC 60079-15.
- The 5069-AEN2TR EtherNet/IP adapter complies to standards IEC 60079-0:6th Edition, IEC-60079-15:4th Edition when used at or below 125V AC, reference IECEx certificate number IECEx UL 15.0007X.
- The 5069-AENTR and 5069-AENTRK EtherNet/IP adapter complies to standards IEC 60079-0:6th Edition, IEC-60079-15:4th Edition, reference IECEx certificate number IECEx UL 16.0124X.
- May have catalog numbers followed by a "K" to indicate a conformal coating option

WARNING: Special Conditions for Safe Use:

- This equipment is not resistant to sunlight or other sources of UV radiation.
- This equipment shall be mounted in an ATEX/IECEx Zone 2 certified enclosure with a minimum ingress protection rating of at least IP54 (as defined in EN/IEC 60529) and used in an environment of not more than Pollution Degree 2 (as defined in EN/IEC 60664-1) when applied in Zone 2 environments. The enclosure must be accessible only by the use of a tool.
- This equipment shall be used within its specified ratings defined by Rockwell Automation.
- Provision shall be made to prevent the rated voltage from being exceeded by transient disturbances of more than 140% of the rated voltage when applied in Zone 2 environments.
- The instructions in the user manual shall be observed.
- Secure any external connections that mate to this equipment by using screws, sliding latches, threaded connectors, or other means provided with this product.
- Do not disconnect equipment unless power has been removed or the area is known to be nonhazardous.
- Earthing is accomplished through mounting of modules on rail.
- Devices shall be used in an environment of not more than Pollution Degree 2.
- The equipment must be used only with ATEX/IECEx certified Rockwell Automation backplanes.
- When installed in a non-hazardous area, the equipment may alternatively be installed in a controlled environment that provides equivalent protection.
- 5069-AEN2TR EtherNet/IP adapter only — The USB port is intended for temporary local programming purposes only and not intended for permanent connection. Do not use the USB port in hazardous locations.

Prevent Electrostatic Discharge

ATTENTION: This equipment is sensitive to electrostatic discharge, which can cause internal damage and affect normal operation. Follow these guidelines when you handle this equipment:

- Touch a grounded object to discharge potential static.
- Wear an approved grounding wriststrap.
- Do not touch connectors or pins on component boards.
- Do not touch circuit components inside the equipment.
- Use a static-safe workstation, if available.
- Store the equipment in appropriate static-safe packaging when not in use.

Electrical Safety Considerations

ATTENTION:

- SELV-listed supplies must be used for MOD and SA power if there are Functional Safety modules connected to the Compact 5000 I/O system.
- 5069-AEN2TR EtherNet/IP adapter only:
 - Do not wire more than 1 conductor on any single RTB terminal.
- 5069-AENTR and 5069-AENTRK EtherNet/IP adapter:
 - All wiring must comply with applicable electrical installation requirements (e.g., N.E.C. article 501-4(b)).
 - Wire conductor and insulation ratings shall support minimum temperature rating of 105 °C (221 °F).
 - Do not wire more than 1 conductors on any single terminal.

**ATTENTION:**

- In case of malfunction or damage, no attempts at repair should be made. The module should be returned to the manufacturer for repair. Do not dismantle the module.
- This equipment is certified for use only within the surrounding air temperature range of 0...60 °C (32...140 °F) The equipment must not be used outside of this range.
- Use only a soft dry anti-static cloth to wipe down equipment. Do not use any cleaning agents.
- 5069-AEN2TR EtherNet/IP adapter only — The USB port is intended for temporary local programming purposes only and not intended for permanent connection. The USB cable is not to exceed 3.0 m (9.84 ft) and must not contain hubs.

**WARNING:**

- If you connect or disconnect wiring while the field-side power is on, an electric arc can occur. This could cause an explosion in hazardous location installations. Be sure that power is removed or the area is nonhazardous before proceeding.
- When used in a Class I, Division 2, hazardous location, this equipment must be mounted in a suitable enclosure with proper wiring method that complies with the governing electrical codes.
- 5069-AEN2TR EtherNet/IP adapter only:
 - When you insert or remove the SD memory Card while power is on, an electric arc can occur. This could cause an explosion in hazardous location installations. Be sure that power is removed or the area is nonhazardous before proceeding.
 - When you press the reset button while power is on, an electric arc can occur. This could cause an explosion in hazardous location installations. Be sure that power is removed or the area is nonhazardous before proceeding.

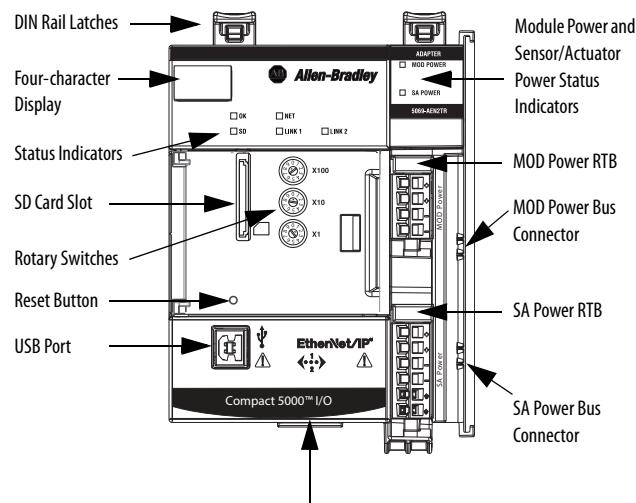

WARNING: Do not use the USB port in hazardous locations. (5069-AEN2TR EtherNet/IP adapter only.)

IMPORTANT

Any illustrations, charts, sample programs, and layout examples shown in this publication are intended solely for the purposes of example. Since there are many variables and requirements associated with any particular installation, Rockwell Automation does not assume responsibility or liability for actual use based upon the examples shown in this publication.

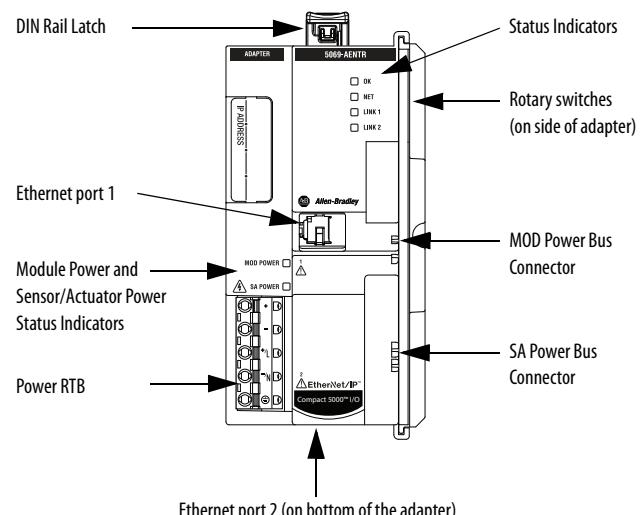

About the Adapters

5069-AEN2TR Adapter

IMPORTANT: Port 1 is the front port and port 2 is the rear port.

5069-AENTR (5069-AENTRK) Adapter

Install a Compact 5000 I/O System

Before you install the adapter, verify that you have the following:

Components Needed to Install a Compact 5000 I/O EtherNet/IP Adapter

Component	Description				
Removable Terminal Blocks (RTB)	<p>One of the following RTB types for each power type:</p> <table border="1"> <tr> <td style="text-align: center;">5069-AEN2TR</td><td> <ul style="list-style-type: none"> MOD power (system-side power) <ul style="list-style-type: none"> 5069-RTB4-SCREW RTB 5069-RTB4-SPRING RTB SA power (field-side power) <ul style="list-style-type: none"> 5069-RTB6-SCREW RTB 5069-RTB6-SPRING RTB </td></tr> <tr> <td style="text-align: center;">5069-AENTR, 5069-AENTRK</td><td> <p>Power (MOD power and SA power on same terminal)</p> <ul style="list-style-type: none"> 5069-RTB5-SCREW RTB 5069-RTB5-SPRING RTB </td></tr> </table> <p>IMPORTANT: You must order RTBs separately. The RTBs are available in 5069 RTB kits.</p> <ul style="list-style-type: none"> The 5069-RTB64-SCREW kit contains the 5069-RTB6-SCREW and 5069-RTB4-SCREW RTBs. DIN rail	<p>Compatible zinc-plated, chromate-passivated steel DIN rail.</p> <p>You can use the following DIN rails:</p> <ul style="list-style-type: none"> EN50022 - 35 x 7.5 mm (1.38 x 0.30 in.) EN50022-35 x 15 mm (1.38 x 0.59 in.) - 5069-AENTR and 5069-AENTRK only 				
EtherNet/IP network components	<p>You must install the network and all required components.</p>				
Software	<p>If you do not use the rotary switches to set the adapter IP address, you can use the following software to set the IP address:</p> <ul style="list-style-type: none"> DHCP server BOOTP DHCP EtherNet/IP Commissioning Tool - We recommend that you use version 3.02.00 or later. RSLinx® Classic software <p>For more information, see Set the Network Internet Protocol (IP) Address on page 9.</p>				

System Planning

Follow these rules when planning your system configuration:

- 5069-AEN2TR adapter only — You must mount the DIN rail horizontally.

Rockwell Automation does not support a Compact 5000 I/O system that is installed vertically if it uses a 5069-AEN2TR adapter.

- The adapter is the left-most component in the bank.
- Local Compact 5000 I/O modules are installed to the right of the adapter.
- The adapter can communicate with as many as 31 local I/O modules.
- Before powerup, verify that the end cap is installed on the right-most Compact 5000 I/O module in the system.

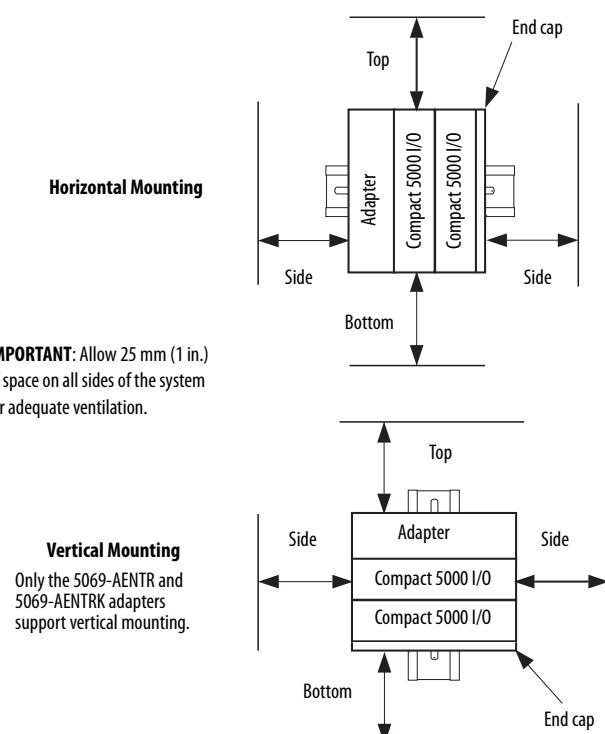

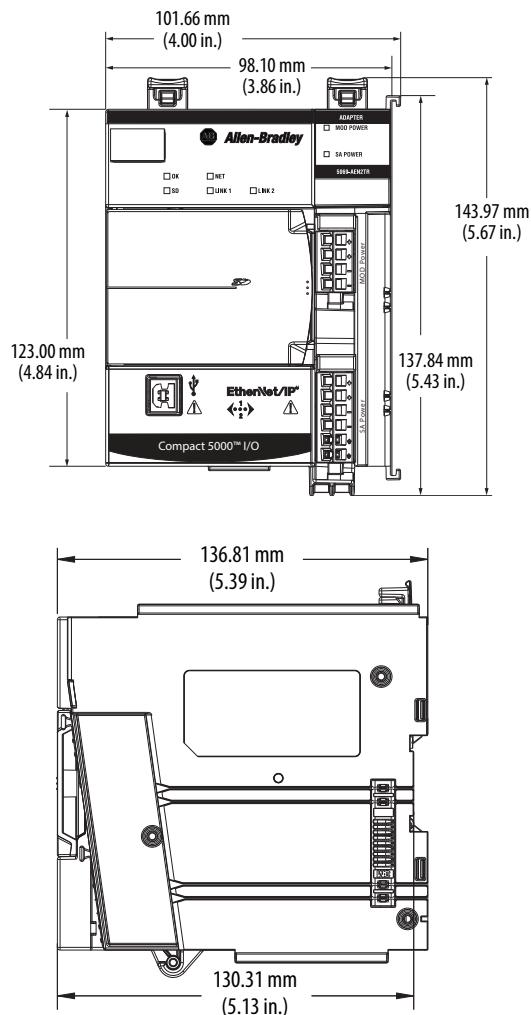

ATTENTION: Do not discard the end cap. Use this end cap to cover the exposed interconnections on the last module on the DIN rail. Failure to do so could result in equipment damage or injury from electric shock.

Spacing

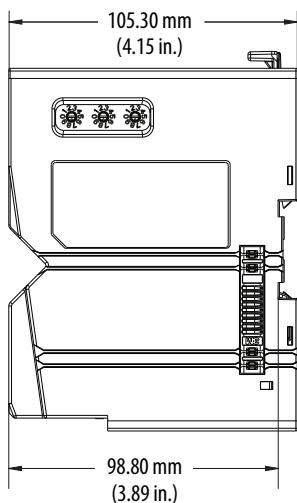

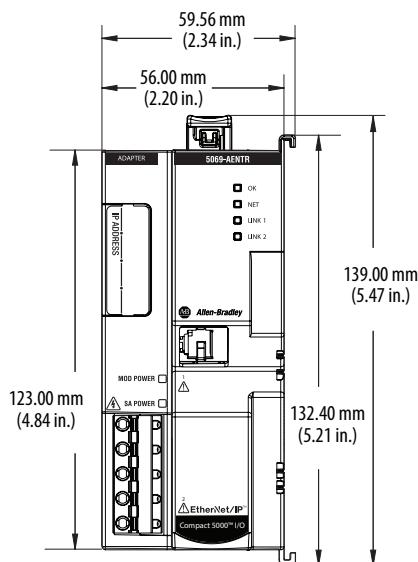

Maintain spacing from enclosure walls, wireways, and adjacent equipment. Consider the following:

- 5069-AEN2TR adapter - You must mount the DIN rail horizontally.
- 5069-AENTR and 5069-AENTRK adapters - You can mount the DIN rail horizontally or vertically.

IMPORTANT When you mount the DIN rail vertically, the operating ambient temperature must be derated to 30% of the maximum Ta or 42 °C (108 °F).

Compact 5000 I/O EtherNet/IP Adapter Spacing**Adapter Dimensions****5069-AEN2TR Adapter Dimensions**

5069-AENTR and 5069-AENTRK Adapter Dimensions

Ground Considerations

You must ground DIN rails according to the Industrial Automation Wiring and Grounding Guidelines, publication [1770-4.1](#).

ATTENTION: This product is grounded through the DIN rail to chassis ground. Use zinc-plated chromate-passivated steel DIN rail to assure proper grounding. The use of other DIN rail materials (for example, aluminum or plastic) that can corrode, oxidize, or are poor conductors, can result in improper or intermittent grounding. Secure DIN rail to mounting surface approximately every 200 mm (7.8 in.) and use end-anchors appropriately. Be sure to ground the DIN rail properly. See Industrial Automation Wiring and Grounding Guidelines, Rockwell Automation publication [1770-4.1](#) for more information.

You can use the following DIN rails with the adapters:

- EN50022 - 35 x 7.5 mm (1.38 x 0.30 in.)
- EN50022 - 35 x 15 mm (1.38 x 0.59 in.) - 5069-AENTR and 5069-AENTRK only

System Power Considerations

Compact 5000 I/O EtherNet/IP adapters provide power to a Compact 5000 I/O system via RTBs that are connected to external power supplies and installed on the adapter.

The RTBs provide the following power to the system.

Power Type	Description
MOD power	<p>System-side power that is used to operate the Compact 5000 I/O system. MOD power is provided through the MOD power RTB and passed across the MOD power bus.</p> <ul style="list-style-type: none"> • The total continuous current draw across the MOD power bus must not be more than 10 A, max, at 18...32V DC. • Confirm that the external MOD power supply is adequately sized for the total MOD power bus current draw in the system, plus the MOD power inrush current requirements.
SA power	<p>Field-side power that is used to power field-side devices. SA power is provided through the SA power RTB and passed across the SA power bus.</p> <ul style="list-style-type: none"> • If you are using DC voltage for SA power, the continuous current draw across the SA power bus must not be more than 10 A, max at 18...32V DC. • If you are using AC voltage for SA power, the continuous current draw across the SA power bus must not be more than 10 A, max at 18...240V AC. • Confirm that the external SA power supply is sized adequately for the total SA power current draw in the system, including the combined inrush current requirements for all connected modules.

IMPORTANT The Compact 5000 I/O EtherNet/IP adapters **do not** have an embedded power supply that powers the system.

- You must use SELV-listed power supplies for MOD power and SA power if there are Functional Safety modules that are connected to the Compact 5000 I/O system.
- If the adapter is used in a safety system, more restrictions can apply to the power supply that is used for SA power.
- Not all Class 2/SELV-listed power supplies are certified for use in all applications, for example, nonhazardous and hazardous environments.

IMPORTANT We strongly recommend that you use **separate external power supplies** for MOD power and SA power respectively. This practice helps to prevent unintended consequences that can result if you use one supply.

If you use separate external power supplies, the loss of power from one external power supply does not affect the availability of power from the other supply. For example, if separate external power supplies are used and SA power is lost, MOD power remains available for the Compact 5000 I/O modules.

For more information on electrical safety considerations, see [Electrical Safety Considerations on page 4](#) and the publications that are listed on [page 20](#).

Set the Network Internet Protocol (IP) Address

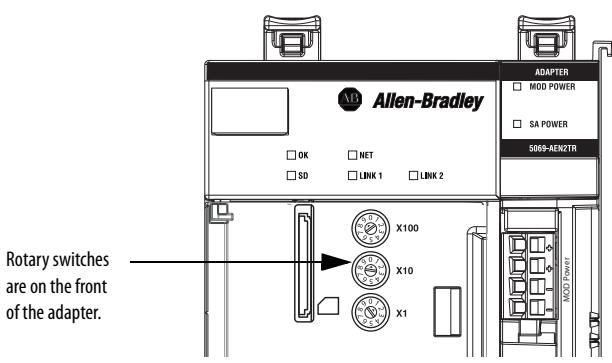

Compact 5000 I/O EtherNet/IP adapters ship DHCP-enabled and with their rotary switches set to 000.

If the network uses 192.168.1.x, we recommend that you use the rotary switches to set the last octet of network IP address. Valid numbers range from 001...254.

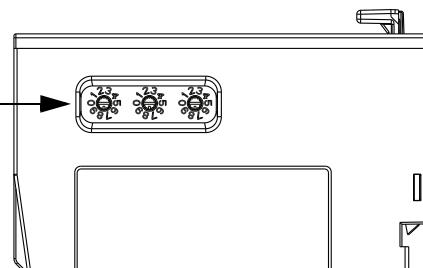

To use the rotary switches to set the IP address, turn the switches to the appropriate numbers before you install the adapter.

- 5069-AEN2TR - The bottom switch represents the first digit in the octet, the middle switch represents the second digit, and the top switch represents the third digit.
- 5069-AENTR and 5069-AENTRK - The left-most switch represents the first digit in the octet, the middle switch represents the second digit, and the right-most switch represents the third digit.

5069-AEN2TR Adapter Rotary Switches

5069-AENTR and 5069-AENTRK Adapter Rotary Switches

WARNING: When you change switch settings while power is on, an electric arc can occur. This arc could cause an explosion in hazardous location installations. Be sure that power is removed or the area is nonhazardous before proceeding.

When you press the reset button while power is on, an electric arc can occur. This arc could cause an explosion in hazardous location installations. Be sure that power is removed or the area is nonhazardous before proceeding. (5069-AEN2TR EtherNet/IP adapter only)

At powerup, the adapter reads the rotary switches to determine if they are set to a valid number for the last octet of the IP address. If the settings are a valid number, these conditions result:

- IP address = 192.168.1.xxx (where xxx represents the switch settings)
- Subnet mask = 255.255.255.0
- Gateway address = 0.0.0.0
- The adapter does not have an assigned host name, nor does it use any Domain Name System

If the network does not use 192.168.1.x, do not change the switch positions before you install the adapter. After you install and power up the adapter, you can use the following to set the network IP address:

- DHCP server
- BOOTP DHCP EtherNet/IP Commissioning Tool - We recommend that you use version 3.02.00 or later.
- RSLinx Classic software

For more information on how to use software to set the IP address, see the EtherNet/IP Communication Modules in Logix 5000 Control Systems User Manual, publication [ENET-UM004](#).

Install the Adapter onto the DIN Rail

The adapter is the first and left-most module in a Compact 5000 I/O system.

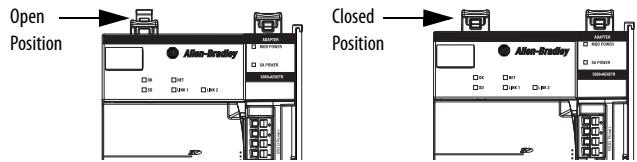

ATTENTION:

- Do not remove or replace the adapter while power is applied. Interruption of the backplane can result in unintentional operation or machine motion.
- During DIN rail mounting of all devices, be sure that all debris (metal chips, wire strands) is kept from falling into the adapter or modules. Debris that falls into the adapter or modules could cause damage on powerup.

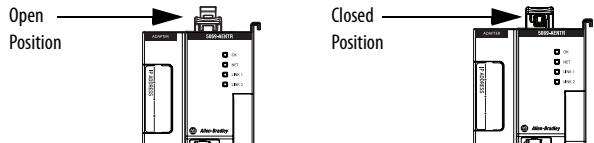

WARNING: If you insert or remove the adapter while power is on, an electric arc can occur. This arc could cause an explosion in hazardous location installations. The module does not support "Removal and Insertion Under Power" (RIUP) capability. Do not connect or disconnect the module while power is applied. Be sure that power is removed before proceeding.

1. Confirm that the DIN rail latches are closed.
2. If the DIN rail latches are open, gently push the rear latch back until the front latch pops up and clicks.

5069-AEN2TR Adapter

5069-AENTR and 5069-AENTRK Adapters

3. Position the adapter so that the back of it faces the DIN rail.
4. Press the adapter against the DIN rail until you hear a click.
5. Confirm that the adapter is latched securely.

Connect Power to the 5069-AEN2TR Adapter

Before you connect MOD power or SA power to a 5069-AEN2TR adapter, complete the following tasks:

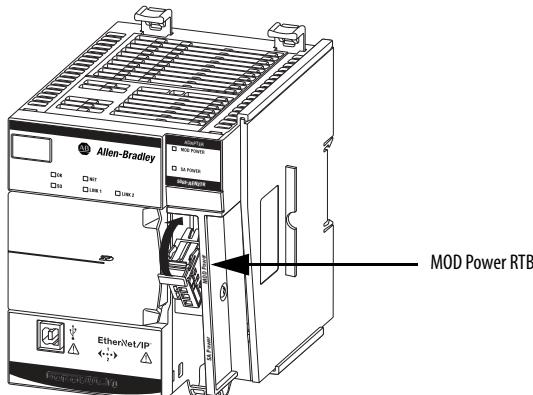

- Read [System Power Considerations on page 8](#).
- Confirm that the external power supplies that supply MOD power and SA power are adequately sized for your Compact 5000 I/O system. For more information, see [page 8](#).
- Verify that the external power supplies that provide MOD power and SA power are turned off.
- Install the MOD power RTB and the SA power RTB, if used, on the 5069-AEN2TR adapter before you connect power to the adapter.

Install the MOD Power RTB

WARNING: If you connect or disconnect the Removable Terminal Block (RTB) with power applied, an Electric Arc can occur. This arc could cause an explosion in hazardous location installations. The Removable Terminal Block (RTB) does not support "Removal and Insertion Under Power" (RIUP) capability. Do not connect or disconnect the Removable Terminal Block (RTB) while power is applied. Be sure that power is removed before proceeding.

IMPORTANT The MOD power RTB is used only on the 5069-AEN2TR adapter.

1. Hook the bottom of the MOD power RTB on the adapter.
2. Push the RTB against the adapter until the RTB clicks into place.

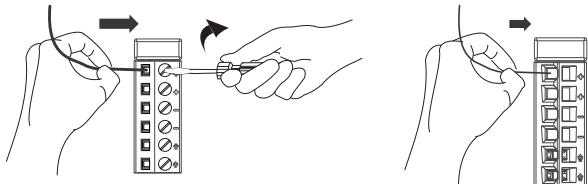

3. Push the RTB handle against the RTB until you hear another click.

3. Connect the L1/AC(+) wire from the external SA AC power source to the first + terminal.

RTB Type	Action
Screw	1. Insert the wire into the terminal. 2. Turn the screwdriver to close the terminal on the wire. Torque the screw to 0.4 N·m (3.5 lb·in).
Spring	Push the wire into the terminal. If the wire is too thin, crimp a wire ferrule on the wire and insert it.

5069-RTB6-SCREW RTB

5069-RTB6-SPRING RTB

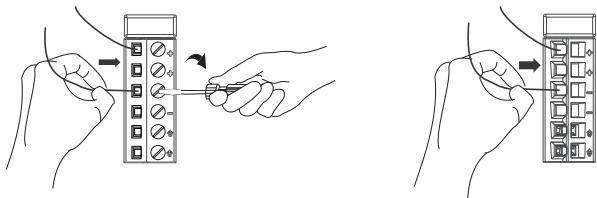

4. Connect the L2/N/AC(—) wire from the external SA AC power source to the first — terminal.

RTB Type	Action
Screw	1. Insert the wire into the terminal. 2. Turn the screwdriver to close the terminal on the wire. Torque the screw to 0.4 N·m (3.5 lb·in).
Spring	Push the wire into the terminal. If the wire is too thin, crimp a wire ferrule on the wire and insert it.

5069-RTB6-SCREW RTB

5069-RTB6-SPRING RTB

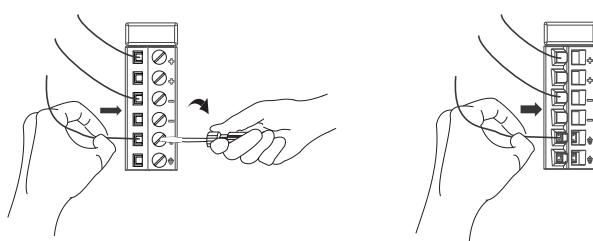

5. Connect a wire from an earth ground location to the first terminal on the RTB. The earth ground location can be the external SA power supply, the DIN rail, or other earth ground location.

RTB Type	Action
Screw	1. Insert the wire into the terminal. 2. Turn the screwdriver to close the terminal on the wire. Torque the screw to 0.4 N·m (3.5 lb·in).
Spring	Push the wire into the terminal. If the wire is too thin, crimp a wire ferrule on the wire and insert it.

5069-RTB6-SCREW RTB

5069-RTB6-SPRING RTB

The symbol denotes an earth ground terminal that provides a low impedance path between electrical circuits and earth for functional purposes and provides noise immunity improvement. This connection must be made for functional purposes.

TIP

Connect Power to the 5069-AENTR or 5069-AENTRK Adapter

Before you connect MOD power or SA power to a 5069-AENTR or 5069-AENTRK adapter, complete the following tasks:

- Read [System Power Considerations on page 8](#).
- Confirm that the external power supplies that supply MOD power and SA power are adequately sized for your Compact 5000 I/O system. For more information, see [page 8](#).
- Install the Power RTB on the 5069-AENTR or 5069-AENTRK adapter before you connect power to the adapter.
