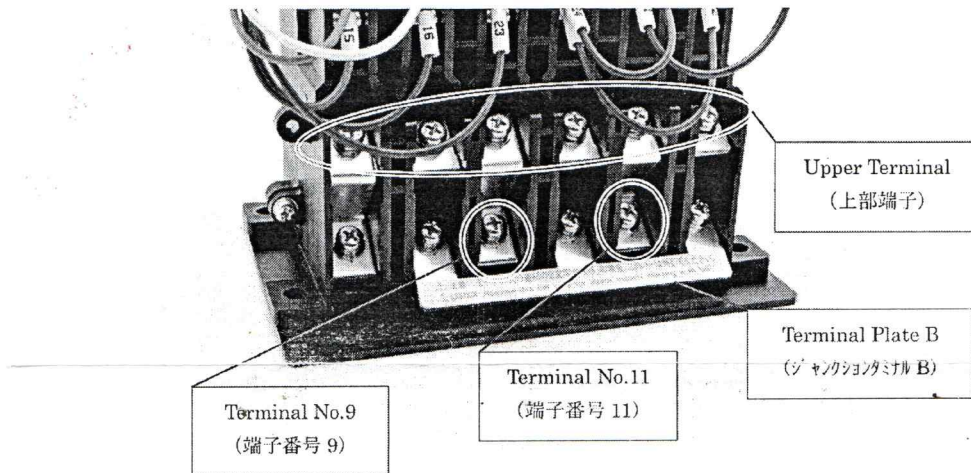

Fig.1 Connecting

1. Don't connect clamp to lower terminals (terminal No.9 and 11) for main circuit.
 It may cause short circuit since there is not enough insulation distance between terminal and terminal Plate B.
 下段の主回路端子 (端子番号 9,11) に接続するとタミナル B との絶縁距離が無く、短絡する恐れがあるので接続しないこと。
2. Connect clamp covered with insulation tube to upper terminals.
 接続は絶縁チューブを付けて上部の端子に行うこと。
